

Module 1 Discussion

Module 1

Discussion: Hypothesis

Discussion Prompt

For this week's discussion, please comment on the 13 items of the Attitudes Towards Global Warming scale (Sinatra et al., 2012). Has it covered all the possible aspects of what it means to be attitudes toward global warming? Considering the scale was developed more than 10 years ago, what item(s) can you add to the scale to reflect what has happened to global warming since 2012? Please provide your reasoning.

Guidelines

- Your initial response to my prompt question should be about 100-200 words in length, reflecting on the prompt above.
- Your response to your classmate's initial post should be around 100 words and add to the discussion (i.e., reflecting on their response, asking questions, and/or making suggestions, etc.).

A good discussion post is:

- Substantial (relates to the course material)
- Concise (one screen may be the ideal message length)
- Provocative (encourages others to respond)
- Hermeneutical (expands concepts or connects ideas in new ways)
- Timely (occurs in a reasonable time frame - when the topic is under discussion)
- Logical (supports point of view with reasons and evidence)
- Grammatical (is well written)

Method of Evaluation
